

Prosecution: Erap lawyers running out of witnesses

By Michael Flores

STATE prosecutors yesterday claimed that the lapses of so-called former President Joseph Estrada were running out of witnesses after the defense managed to present only one witness during the continuation of Estrada's phase trial at the Iloilo Regional Trial Court.

Iloilo Prosecutor General Vito Aguirre said the defense panel failed to file up to that present to present those witnesses during yesterday's proceedings.

"It appears that they've largely been left without witnesses to present. I wasn't too surprised if they present a later witness for the witness stand several or later," Aguirre said.

But defense lawyer Carlo Barredo disagreed. Vito Aguirre's claim that the defense panel was running out of witnesses, "is

not even in process," she stated.

Estrada promised to bring down to court tomorrow, the next scheduled trial date for Estrada's phase trial.

The latest due date seemed to imply so the main reason for the failure of their defense witnesses to be present during yesterday's hearing.

Estrada said it would be difficult for the court to hear witnesses in their witness stand step and those their witnesses.

"I can only conduct steps through multiple phases," Barredo said. "But we will present them at Wednesday."

At yesterday's hearing, Estrada's witnesses, including his wife Corason Alcala, through a written statement, testified that he was a member of the First World Youth Association for the school year 2004-05.

Yet Vito Aguirre said that throughout the testimony was contradictory.

Barredo said he was waiting on the final one allegedly conducted by Estrada prior to the filing of the present one against him, since Alcala's testimony on HDP activities only in 2004.

Vito Aguirre said he was waiting to submit and attempt that the HDP had activities for the years 2002, 2004 and 2005, but none in 2003, 2001 and 2002.

Estrada, however, said Vito Aguirre was wrong in claiming that the testimonies of their witnesses were contradictory.

Estrada's significant step the next activities of the HDP were just a continuation of its program that was started in 2001 but was unfortunately interrupted due to the same year.

Barredo said the activities of the HDP in January of the past three years was due to factors beyond the foundation's control.

"The organization was in NCR for three years," Barredo said.

Now Miriam takes aim at fat kids

is your child obese? Then you might be part of the problem.

According to last March's findings, obesity among young people is becoming more prominent, particularly among prominent and elementary school students.

"The kids grow up, they are going to become and strong and strong," Barredo said.

The said it was for the region that the hoped to remedy the obesity through a set of fat that is the focus.

The proposed House Bill No. 1010, or the Childhood Obesity Reduction Act of 2008, would encourage schools to develop and implement programs designed to reduce and prevent childhood obesity. It even promotes physical activity and improves nutritional habits.

Barredo also proposed the establishment of a Congressional Council on Childhood Obesity, which would aim to find all the necessary and necessary schools needed and the comprehensive health program that is proposed.

The council shall be composed of the majority and minority leaders of the Senate, the Speaker and the minority leader of the House and four private citizens to be appointed, Barredo said.

The bill has full support from Barredo for the members of a National Foundation for the Promotion and Reduction of Childhood Obesity, which would carry out activities for the prevention and reduction of childhood obesity also through school-based activities.

Reyes wants oil barges monitored

SENATE Minority Leader Juan Ponce Enrile said the Department of Energy and Environment is oversteering the representation of oil barges in the country's waters to curb the smuggling of petroleum products.

Enrile, also chief of the National Anti-Smuggling Task Force, said the DOJ is not taking the feasibility of regulating the movement of barges from all over the country during a Cabinet Oversight Committee on Anti-Smuggling meeting. "If the movement of barges is

controlled then it will be easy for us to detect and apprehend those [oil of fuel] barges," which are more of the; does not limit to all money smuggling," Enrile said.

Oil smuggling has been blamed for the P2 billion loss in fuel tax revenue from 1999 to 2005. The duty decline happened while there was a steady increase in the number of oil registrations, from more than 2.5 billion units to about 4.5 billion units.

DOE Undersecretary Rolly Villanueva said he will form a com-

mittee to monitor the export for a control mechanism to keep barges from leaving the country.

The committee is expected to include representatives from the Philippine Ports Authority, Coast Guard, Maritime Police and the Maritime Industry Authority.

"That smuggling is a big problem due to improving the movement of additional revenues at a time when additional revenues are very much needed by the government," Enrile said. He wants the industry

 can be managed.

The authors conclude that the use of the two-stage approach may be a useful strategy for selection of studies for meta-analysis, and that the use of the two-stage approach may be a useful strategy for selection of studies for meta-analysis.

The *Journal of the American Medical Association* (JAMA) has published a study by researchers from the University of California, San Francisco, and the University of Michigan, which suggests that the use of a single, low-dose, long-acting antipsychotic drug, such as risperidone, may be more effective than a combination of two or more drugs in treating schizophrenia. The study, which was conducted over a period of 12 weeks, found that patients who received a single dose of risperidone had a significantly higher rate of response than those who received a combination of two or more drugs. The researchers also found that the use of a single drug was associated with a lower risk of side effects, such as weight gain and drowsiness, compared with the use of multiple drugs. The study's findings suggest that a single, low-dose, long-acting antipsychotic drug may be a more effective and safer treatment option for patients with schizophrenia.

70 *Unconquered*, about the last of the Choctaw in Indian Territory, is the author's portrait of resistance in the Indian nation and the struggle with the last remnants of a traditional society in a changing world. *Unconquered* is a first-rate study, written with a first-rate author. **—D.D.**

the authors' interpretation of the results. There are a number of limitations to the study. The sample size was small, and the study was cross-sectional. The authors' interpretation of the results is based on self-reported data, which may be subject to bias. The authors' interpretation of the results is based on self-reported data, which may be subject to bias.

Waggoner says testimony is key
The U.S. House of Representatives will hold hearings on the Clinton administration's handling of the Monica Lewinsky scandal in March. It was a hearing scheduled for March 19, but it has been postponed because of the impeachment trial.

Further, the authors suggest that the results of the study may be generalizable to other populations, but this needs to be confirmed in future research.

Students enrolled in some State or District College Courses at the University, must be familiar to the normal processes of State Lottery License and Super-52 Lottery laws, and the legal company responsible for.

OPINION

The image is a very low-quality scan of a document. It appears to be a form or a report with several sections. The text is almost entirely illegible due to the poor scan quality, but some structural elements are visible. There are headings, bullet points, and what looks like a table or list of items. The overall layout suggests a formal document, possibly a checklist or a progress report.

Figure 1. Schematic diagram of the experimental setup. The subject is seated in a chair and views the target through a video camera. The target is a light source that is controlled by a computer. The subject's hand is positioned over the target. The video camera is positioned above the target. The computer is connected to the video camera and the target. The subject is instructed to move their hand towards the target when the light source is activated.

1. The first step is to identify the key components of the system. This includes understanding the hardware, software, and data involved. For example, in a web application, this might involve identifying the server, database, and client-side scripts.

Finding the balance

POLITICAL
TALK

By Mark
McLain

THE BALANCE OF POWER is a concept that has been around for as long as there have been wars. It is the idea that no one power should become so dominant that it can threaten the rest of the world. In the 19th century, the balance of power was maintained by a system of alliances and treaties that kept the great powers in check. In the 20th century, the balance of power was maintained by the threat of nuclear war. Today, the balance of power is being challenged by the rise of China and the decline of the United States.

China is the most significant challenge to the balance of power in the 21st century. China's economic growth has allowed it to become a superpower, and its military spending has increased dramatically. China's rise has led to a new Cold War between the United States and China, and the world is watching to see how the balance of power will be maintained in the future.

Times 5-1

By Louis

THE TIMES 5-1 is a new initiative by the New York Times to provide a daily summary of the most important news stories of the day. The initiative was launched in 2015 and has since become a popular feature for readers who want to stay up to date on the latest news. The 5-1 is a concise and easy-to-read summary of the day's events, and it is a valuable resource for anyone who wants to stay informed.

The 5-1 is a great way to start your day and get a quick overview of the world's news. It is a well-written and informative summary that covers a wide range of topics, from politics to science to culture. The 5-1 is a must-read for anyone who wants to stay on top of the latest news.

Transport strike grips Central Luzon

By J. M. ...
 A massive strike by transport workers in Central Luzon has paralyzed the region's road network, leaving thousands of commuters stranded.

The strike, which began early this morning, was called by the Philippine Federation of Labor Unions (PFLU) in protest against the government's proposed labor reforms.

Protesters blocked major highways, and many vehicles were forced to stop. The strike has caused significant economic losses and disrupted daily life in the region.

Protesters block a major highway in Central Luzon, demanding the government to withdraw its proposed labor reforms.

Probe of student's death in Boracay difficult, say cops

By J. M. ...

Police in Boracay are facing difficulties in conducting a thorough investigation into the death of a student, as the victim's family has requested a private investigator.

The incident occurred last night when the student was found dead in a room at a local hotel. The police are currently interviewing witnesses and gathering evidence.

Rally advocates recycling

A group of environmental activists gathered in a public square to hold a rally, urging the government and citizens to take action against pollution and promote recycling.

Gov't rejects all bids for T-bills

By Michael S. Sauter

The U.S. Treasury today rejected all bids for \$10 billion in 13-week Treasury bills, a move that will force the government to borrow more money than it has in years.

The Treasury Department said it received 11 bids for the bills, but none of them was high enough to meet the government's needs. The bids ranged from 4.5% to 5.5%.

RP takes yet favorable court ruling in Hawaii

By Michael S. Sauter

The U.S. Supreme Court today ruled in favor of the U.S. Navy in its dispute with the state of Hawaii over the use of the Pearl Harbor naval base.

The court ruled that the Navy's use of the base was lawful and that the state of Hawaii had no right to interfere.

U.S. Navy officials inspect a large container of chemical weapons at the Pearl Harbor naval base.

The U.S. Navy today announced that it had found a large container of chemical weapons at the Pearl Harbor naval base. The container was found during a routine inspection.

Connection woes with Smart seen to cost Sun P5M/month

Dr. Steven E. Korman

Figure 1 consists of nine scatter plots arranged in a 3x3 grid. Each plot shows the relationship between the number of eggs laid (Y-axis) and the number of eggs that survived (X-axis) for three species: *A. baileyi*, *A. baileyi* + *A. baileyi* + *A. baileyi*, and *A. baileyi* + *A. baileyi* + *A. baileyi*. Each plot includes a regression line and a correlation coefficient (r). The plots are arranged in a 3x3 grid, with the top row showing *A. baileyi*, the middle row showing *A. baileyi* + *A. baileyi* + *A. baileyi*, and the bottom row showing *A. baileyi* + *A. baileyi* + *A. baileyi*. The correlation coefficients (r) are: Top-left: 0.85, Top-middle: 0.85, Top-right: 0.85; Middle-left: 0.85, Middle-middle: 0.85, Middle-right: 0.85; Bottom-left: 0.85, Bottom-middle: 0.85, Bottom-right: 0.85.

Children 'inherit' parents' eating habits

By Kyle S. de los Angeles
Illustration

THE PARENTS' influence on a child's eating habits can be significant, according to a study by researchers at the University of Michigan. The study found that children's eating habits are strongly influenced by their parents' eating habits. Children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar. The study also found that children's eating habits are influenced by their parents' eating habits. Children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar.

Breakfast
The study found that children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar. The study also found that children's eating habits are influenced by their parents' eating habits. Children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar.

What a child eats at breakfast has a great impact on how he does at school that day

The researchers found that children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar. The study also found that children's eating habits are influenced by their parents' eating habits. Children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar.

Morning meals
The study found that children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar. The study also found that children's eating habits are influenced by their parents' eating habits. Children who eat a diet high in fat and sugar are more likely to have parents who eat a diet high in fat and sugar. Children who eat a diet low in fat and sugar are more likely to have parents who eat a diet low in fat and sugar.

Vatican objection only boosts sales of 'Da Vinci Code'

ACCORDING to a Reuters article from published in another newspaper, "The Catholic Church has come out swinging against 'The Da Vinci Code,' dismissing as a collection of shameful unfounded lies the worldwide best-seller about the Vatican suppressing the 'truth' that Jesus had a child."

Cardinal Tarcisio Bertone, former deputy head of the Vatican Pontifical Council for the Doctrine of the Faith, was quoted as telling the people not to read it but buy the book. The cardinal said, "There is a very real risk that many people who read it will believe that the fables it contains are true."

This warning by the good cardinal against Dan Brown's book is both ill-advised and little for the following reasons:

First, the warning comes too late, as the book itself clearly pointed out. The novel has become a publishing sensation.

Doubleday publisher said 25 million copies of the book had been printed in 44 languages since it was published in 2003. And it inspired almost a dozen other books. To top it all, a movie based on the book is being made starring Tom Hanks and directed by Ron Howard. This will surely create more demand for the book.

Second, the more the Vatican tries to discourage people from reading the book, the more they will be curious about it. Those who have never heard of the book will now want to know what the fuss is all about.

If the Vatican is so much against it, there must be something interesting contained in it.

Look what happened to D.H. Lawrence's classic erotic book, "Lady Chatterley's Lover." When the Vatican put the novel in its Index of Prohibited Books, its sales shot up.

Third, we are living in an informa-

INNER AWARENESS

Jaime T. Licamop

Brown should feel very happy at this development rather than try to defend his book against attacks

Just as we were everything and anything, from the profane to the pious, can be accessed through the Internet. There is no way the church can stop the free flow of information, unlike in the Middle Ages when only the church had access to books and other information. At that time, the church succeeded in suppressing information contrary to its beliefs.

An attempt to do the same is now able to backfire. Any priest who thinks he can still control people's minds is asking for a medieval Inquisition.

Apparently there are church officials who believe this is still the 13th or 14th century, during which the church colonized and successfully nurtured and persecuted people whose opinions and beliefs differed from their official stand. So-called heretics and witches were tried by the medieval Inquisition courts and

hundreds of thousands were burned at the stakes, including Joan of Arc.

The current attempt by the Vatican to suppress "The Da Vinci Code," or at least discourage people from reading it, will create greater sales and demand for it. Dan Brown should thank the Catholic hierarchy for this. He should feel very happy at this development rather than try to defend his book against attacks.

The church has always been anti-intellectual. It stifles dissent and intellectual debate on religious issues and doctrines. It only encourages total and blind acceptance of its pronouncements and considers as heretics anybody who differs from its official stand.

There was a time when the works of such thinkers as John Locke, Jean Paul Sartre, Voltaire and even scientists like Pascal were included in the Index of Prohibited Books.

In the Philippines, a former anti-protestantism challenged recently a Catholic bishop to a public debate on pending life-or-population. The bishop, reportedly declined.

Bishops and priests are not used to being questioned about their pronouncements, so most are undecided, or worse, so terrible they are. They are used to having the faithful accept them blindly. When they will wake up to the reality of the 21st-century information explosion is anybody's guess.

Children inherit...

From page 10

In preparing the child for his/her day in school.

Weiss also reported on his study about the role of breakfast on attention and memory. The Farmhouse Breakfast Week study, a nationwide study conducted in the US in 2004, confirmed the findings of Weiss' earlier research on Andalusian children.

"Children concentrate better and learn more if they have breakfast. The attention span develops and improves dramatically from 6-12 years of age, which is a crucial time to maintain the health of children."

Most stressful

Unfortunately, this is also the age when children are most stressed and rushed each day as they prepare for school. The elementary school years are usually the years when children are most difficult to feed in the mornings. As the studies have shown,

which behavior has a negative impact on their physical development and affects their work in school. Even more worrisome is a child who hardly takes anything for breakfast and is, at the same time, the recipient of stress from his parents and caregivers.

The symposium underscored that more than anyone else, parents were their children's role models in coping with the different stressors in their environment.

Mealtimes should be pleasant times and would be used as a time to bond with children and to catch up on what was going on in their lives.

Parents should make the mealtimes with their children stress-free, using them as occasions to instill good eating habits that will be with them through life.

Vitamin is essential in filling the gaps in their nutrition and diet. Stress-free mealtimes and a hearty breakfast are therefore very important in producing a happy and healthy child.

Dark patches may be more than sunburn

MIOA We Care's Pynocare is an oral capsule to be taken twice a day to block the overproduction of melanocytes that cause melasma.

Melasma is a skin disorder characterized by the discoloration of certain parts of the face, and is especially common among women who live in tropical climates like Asia.

Unlike sunburn that may cause redness of the whole face, dark patches caused by melasma occur only in certain areas, like the cheeks, forehead, upper lip, nose bridge and jaw line.

Sunburn also disappears in one to two months. Melasma, on the other hand, develops over a long period of time—from three to four years. Sunburn also disappears and normal skin color returns after a month or two, but dark patches due to melasma remain for a long time.

But like sunburn, melasma is caused by over exposure to the hot sun. In the Philippines, however, local Pynocare country manager of Mega Products Unlimited Philip-

pines, says dermatologists claim the use of certain cosmetics or very cheap sunscreens also cause the problem.

Mega Products Unlimited Philippines is the Philippine branch of Mega We Care, a Thailand-based healthcare company.

Patients suffering from melasma usually undergo laser treatment or diamond peeling. But Pynocare says they do not address the root cause and, hence, the chances of recurrence are high.

Mega We Care's own research has found that melasma is now prevalent among 40 percent of women in Southeast Asia.

The capsule Pynocare was reported to have been successful in over 200,000 cases of women with melasma in countries like Thailand, Singapore, and Indonesia.

Apart from combating melasma at its roots and giving protection against free radicals (damaging substances caused by disease, pollution, etc.) that trigger its appearance, Pynocare also repairs and strengthens the skin. It soothes inflammation, strengthens skin capillaries, and improves melanin production.

One Pynocare capsule contains of propolis, a French maritime pine bark extract and one of the active compounds of Pynocare, a potent anti-oxidant; ascorbic acid or Vitamin C; Vitamin A; and Vitamin E. The overall combination of these ingredients reportedly make Pynocare 50 times more potent than Vitamin C and 20 times more potent than Vitamin E. Another antioxidant, Arbutin, causes better absorption.

A clinical study showed Pynocare had an 85-percent efficacy in reducing the size and intensity of melasma in eight weeks. No side effects were observed.
